

Basket Set Pricing Calculation

Many baskets are sold in a set of graduated sizes so that the manufacturer can take advantage of shipping and packing efficiencies. In your shop, you need to know what each piece cost you so that you can calculate accurate sell prices. Use the chart below to determine the cost. Find the number of items in the set and follow down the column to the size piece on the left. You will find a percentage figure. Multiply the full cost of the set by the percentage figure to determine the cost of that individual size piece.

	3 Piece Set	4 Piece Set	5 Piece Set	6 Piece Set	7 Piece Set
Smallest Piece	25%	17%	10%	9%	7%
	33%	22%	15%	11%	9%
	42%	28%	20%	15%	11%
		33%	25%	18%	15%
			30%	22%	18%
				25%	22%
Largest Piece					25%

For example: If a three piece basket set cost you \$7.95, the costs of each basket are figured as follows:

Smallest 25% x \$7.95 = \$1.99

Medium 33% x \$7.95 = \$2.62

Largest 42% x \$7.95 = \$3.34
